

## **Environmental Changes Study Guide Key**

### I. Vocabulary Matching

Environment

Survive

Migration

Hibernation

Reproduction

### II. Identification

Non-living

Soil – Nutrients

Dry

Organisms

### III. Open-Ended Questions

1. When an insect population increases in an environment, then that is an increased food source for the birds. This will help the birds survive and may increase the population over time.
2. Things that can harm an ecosystem include human impacts such as building roads or homes. It can also include natural disaster such as floods or drought.
